

Chapel Builders of California

Upcoming Project: Help needed

Starting May 22nd, we'll be working with the Central Baptist Church in Bedford Texas and will be remodeling their sanctuary.

This is a geodesic dome and we are removing the existing paneling to expose the drywall behind it, and then will be taping and finishing the drywall. Because of the shape of the building there will be individual panels of drywall that will need to be finished. This will be time consuming and specialized, as there are no flat walls making it a challenge to finish.

If you are pretty good at finishing drywall by hand and like a challenge.... We need you!

We will also be adding stonework on the stage area at the baptistery and could use help there.

Also all of the trim work at baseboards doors etc. will be at odd angles and challenging... again if you're up for a challenge... we need you.

I'm hoping for a small but qualified team to handle this project. We'll be starting May 22nd and we will be working probably 3-4 weeks to finish. If you can come all or part of this time please let me know.
